# Download Helper Mediathek View Web

Helper to download SRF videos with the help of MediathekViewWeb.

### How it works

Use MediathekViewWeb to download the index-file (m3u8 playlist file). Pass URL and video name to script to download all segments of the video file. After that all segments get concatenated by ffmpeg to a single video file.

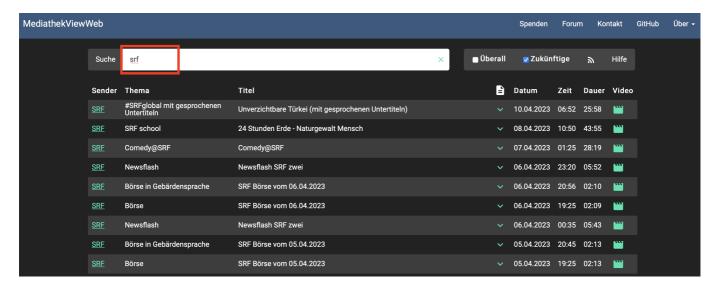

Afterwards it deletes all intermediate files (index, segments, etc.).

#### How to use

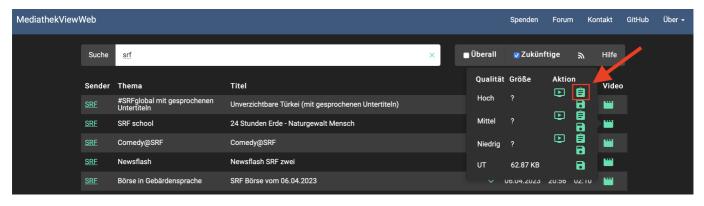

- Make sure ffmeg is installed and available on \$PATH (e.g. accessible from command line)
- Make sure you have at least bash v3.2.57 (check with bash --version)
- Download version from lastest release
- The basic syntax is ./download-srf-videos.sh "[index-url-from-mediathek]" "
  [final-video-name]"

#### 1. Get URL From MediathekViewWeb

Open www.mediathekviewweb.de and search for srf videos.

Get the URL of the index file of the video you want to download.

README.md 4/14/2023

# 2. Use Script To Download

# **Example**

```
./download-srf-videos.sh "https://srf-vod-amd.akamaized.net/ch/hls/myschool/2023/04/myschool_20230405_002054_18307622_v_we bcast_h264_,q40,q10,q20,q30,q50,q60,.mp4.csmil/index-f6-v1-a1.m3u8" "some-video"
```

## 3. Done

After the script finished your video is ready.
